1. First Week (17/02/2022 – 23/02/2022)

- Created a rough code that is intended to be a simple search engine
  - Type of data distance: **Cosine Similarity**
  - Targetted website is set to kompas.com since the documents are in HTML format
    - Additionally, this is also inteded as a starting point before modifying the working code to mine different website(s)
  - **Known Problems**
    - Bs4 library seems to be missing
    - Test runs are not yet able to be done due to the aforementioned issue

2. Second Week (24/02/2022 – 02/03/2022)

- Development_record created to document details regarding the current progress and upcoming target
- Previously-known issues (in the first week) are not yet fixed, therefore no changes were made to the code

3. To-do List

- Fixing the error surrounding the bs4 library **(PRIORITIZED)**
- Testing the code to a CNBC news dataset
- Testing the code to kompas.com
- Directing the code to mine PubMed's article abstracts
